TUTORIAL

Importing Script

This tutorial tells you the steps to import a script that you created with Grasshopper. Follows tutorial “Exporting Program.”

01 Plug the USB into the teach pendant

Take your .script file and copy it onto a USB (Type A or use an adapter).
Put the USB into the top of the teach pendant.

02 Open system manager

Select the menu (3 bars) on the top left of the screen to bring up the menu.
Open the System Manager.

03 Select Script File

Go to 'Script Files' on the left menu.

04 Add the Script File

Add the script (select the blue '+ Script' button) and select the script you want to add
Then confirm.

05 Select the Program

Stay in the System Manager and select the 'Program' icon on the left menu.

06 Create the new program

Create a new program (select the blue '+ Program' button) and select 'Create New Program'. Enter the program name and confirm.

07 Select and open the program

Close the system manager.
Once out of the System Manager, select the 'Program' on the main menu on the left. Once you open it you will see the name of your program at the top.

08 Edit the program by adding your script

Press the blue + and select 'Script', the '{}' icon.

Press the yellow 'Set Script' button.

Import your script (select the dropdown menu) and you will see your script.

Save it.

09 Run your program

Change the speed to 20% or so for safety (speed is on the bottom right corner).

Engage the dead man switch (yellow buttons on the back - 1 click not 2).

With the deadman engaged, press play.

You can stop the program by pressing stop or by releasing the dead man switch.
